## RIDDLE

I'm a number multiple  
of four or two.  
I am a two digit number  
I'm even  
When count by two or four  
you say this number.

I'm in the twenties?

write number here \_\_\_\_\_

I'm multiple of four or two.  
2, 4, 6, 8, 10, 12, 14, 16, 18, 20  
22, 24 or 4, 8, 12, 16, 20, 20

You have to count to get to  
this number.

I'm a two digit. 2 4

You have to have 2 numbers

I'm even.

even is when you have ten you can  
pair it together by two.

2, 4, 6, 8, 10

When you count by four or  
two you say this number.  
you have to count by this  
number  
2 or 4.

I'm in the twenties.

22

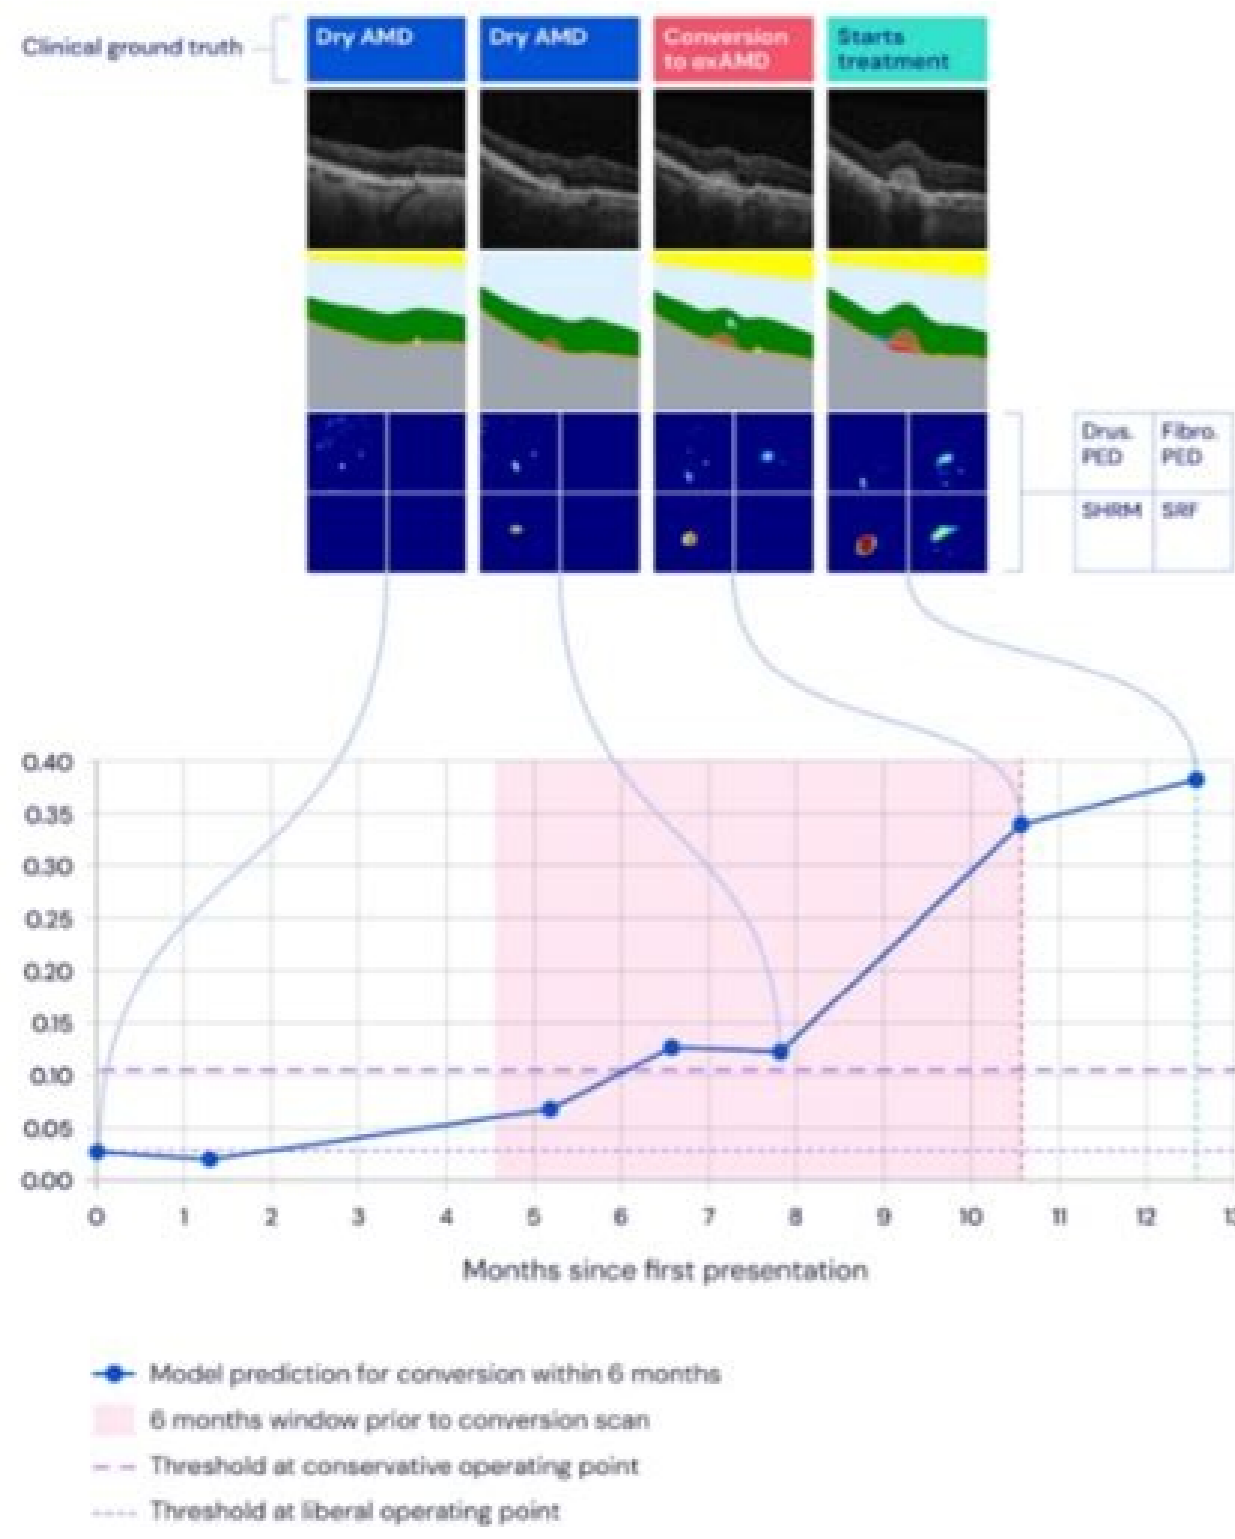

My number  
is in the twenty that means the tens is 2

## THE OILY PRESS

Kabadiwallahs and rag-pickers do a great job of separation of materials for recycling of different kinds of wastes. This is a practical, hygienic, efficient and cost-effective solution to human waste disposal. Download revision notes for Environmental Issues class 12 Notes and score high in exams. The revision notes covers all important formulas and concepts given in the chapter. UV rays are highly injurious to living organisms. The thickness of the ozone-layer in a column of air from the ground to the top of the atmosphere is measured in terms of Dobson units (DU). Global warming is caused due to greenhouse effect. Scientists believe that this rise in temperature is leading to harmful changes in the environment and resulting in odd climatic changes (e.g. El Nino effect), thus leading to increased melting of polar ice caps. Global warming can be controlled by Cutting down use of fossil fuel Improving efficiency of energy usage Reducing deforestation Planting tree Slowing down the growth of human population. Ozone Depletion in the Stratosphere Ozone found in the upper part of the atmosphere called stratosphere acts as a shield absorbing ultraviolet radiation from the sun. This phenomenon is called Cultural or Accelerated Eutrophication. There are many methods of removing particulate matter; the most widely used is the electrostatic precipitator. Electrostatic Precipitator- can remove over 99% of particulate matter present in the exhaust from thermal power plant. It has electrode wires that are maintained at several thousand volts to produce a corona that releases electrons. Such wastes need careful treatment and disposal. Due to this colour of water bodies get changed. Catalytic converters contain platinum-palladium and rhodium as the catalyst, are fitted into automobiles for reducing emission of poisonous gases. This causes mortality of fish and other aquatic creatures. BOD refer to the amount of oxygen that would be consumed if all the organic matter in one litre of water were oxidized by bacteria. Recycling is the only solution for the treatment of e-wastes provided it is carried out in an environment-friendly manner. Agro-chemicals and other effects: Use of inorganic fertilizers and pesticides has been increased many fold due to green revolution for enhancing crop production. The collecting plates are grounded and attract the charged dust particles so that clean air can pass through electrostatic precipitator. A scrubber can remove gases like sulphur dioxide. Chlorine atoms trap oxygen atoms and ozone is not formed again from oxygen. These notes will certainly save your time during stressful exam days. To download Environmental Issues class 12 Notes Biology, sample paper for class 12 Physics, Chemistry, Biology, History, Political Science, Economics, Geography, Computer Science, Home Science, Accountancy, Business Studies, and Home Science, do check myCBSEguide app or website. Over half of the e-wastes generated in the developed world are exported to developing countries, mainly to China, India and Pakistan, where metals like copper, iron, silicon, nickel and gold are recovered during recycling process. Sanitary landfills were used as substitute for open burning dumps where wastes are dumped in a depression or trench after compaction and covered with dirt every day. The fine particles can be inhaled deep into the lungs and can cause breathing and respiratory symptoms, irritation, inflammations and damage to lungs and premature death. Due to addition of nutrients such as nitrogen and phosphorus that encourage the growth of aquatic organism the accumulation of organic remains in course of time leads to shall lowing of lake. Due to disposal of all kinds of waste and other anthropogenic actions the ponds, lakes, stream, river, estuaries and oceans are becoming polluted in several parts of world. Revision notes in exam days is one of the best tips recommended by teachers during exam days. Download Revision Notes as PDF CBSE Class 12 Biology Revision Notes Chapter 16 Environmental Issues With increase in human population, demands for food, shelter, water, electricity, roads, and automobiles are increasing rapidly and exerting pressure on environment and altering the natural health of ecosystem. People all over the world have appreciated the Chipko movement. Realising the importance of participation by local communities, the Government of India in 1980s has introduced the concept of Joint Forest Management (JFM) so as to work closely with the local communities for protecting and managing forests. CBSE Class 12 Revision Notes and Key Points Environmental Issues class 12 Notes Biology, Organisms involved. Thermal power plants, smelters and other industries release particulate and gaseous air pollutants along with harmless gases such as nitrogen, oxygen etc. Duration of exposure. Noise also causes sleeplessness, increased heart beating, altered breathing pattern, thus considerably stressing humans. The goal of this policy is to reduce Sulphur to 50 ppm in petrol and diesel and reduce levels of aromatic hydrocarbons to 35% of the fuel. They are introduced into India for their beautiful flowers that have caused havoc by their excessive growth by causing blocks in our water bodies. It has been recommended that storage of nuclear wastes after sufficient pre-treatment should be done in suitably shielded containers and buried within the rock about 500m deep below the earth surface. Green House Effect and Global Warming The greenhouse effect is a naturally occurring phenomenon that is responsible for heating of Earth's surface and atmosphere due to increase in concentration of carbon dioxide and methane gas. Over the centuries the silt and organic debris piles up at the bottom of lake and encourage the growth of marsh plants in the shallow and begin to fill in the original lake basin. They are biomagnified in the terrestrial ecosystem and also causes eutrophication in aquatic ecosystems. Organic Farming Integrated organic farming is a cyclic, zero-waste procedure in which waste products from one process are cycled in as nutrients for other processes to allow the maximum utilization of resource and increase the efficiency of production. A mere 0.1% impurities make domestic sewage unfit for human use. These are the Environmental Issues class 12 Notes prepared by team of expert teachers. No chemical fertilizer is used in this process. Radioactive Wastes Nuclear energy has two very serious problems- Accidental leakage Safe disposal of radioactive wastes The radiation released from nuclear wastes is extremely damaging to biological organisms as it causes mutations to occur at very high rate. Even if you wish to have an overview of a chapter, quick revision notes are here to do it for you. myCBSEguide provides sample papers with solution, test papers for chapter-wise practice, NCERT Environmental Issues, NCERT Exemplar Environmental Issues, quick revision notes for ready reference, CBSE guess papers and CBSE important question papers. They use organic wastes as nutrients. Biological Oxygen Demand (BOD) The microbes that decompose organic wastes in water bodies consume a lot of oxygen that result into sharp decline in dissolved oxygen downstream from the point of sewage discharge. CBSE, NCERT, JEE Main, NEET-UG, NDA, Exam Papers, Question Bank, NCERT Solutions, Exemplars, Revision Notes, Free Videos, MCQ Tests & more. Such exposure may permanently damage the cornea. Chlorofluro Carbons deplete the ozone layer. Incinerators are used for disposal of hospital wastes. Electronic wastes- Unrepairable computers and other electronic goods are known as electronic wastes (e-wastes). This need is commonly known as 'Terror of Bengal'. Biomagnification or Biological Magnification Toxic wastes present in industrial wastes and water from farmhouse containing pesticides and weedicides enters the food chain of aquatic organisms. The harmful effect of pollution on all the living organisms depends upon- Concentration of pollutants. This may cause deterioration of the water quality and fish mortality. Water hyacinth (Eichhornia crassipes) is the world's most problematic aquatic weed. Ozone layer absorbs the harmful UV-rays. The part of atmosphere with lesser concentration of ozone is called ozone hole. Steps leading to ozone depletion : UV-rays split CFCs and release atomic chlorine (Cl) UV-rays also split ozone into oxygen. that are collected and disposed by the municipality. The most common toxicant that get accumulated at successive trophic levels includes DDT and Mercury. High concentrations of DDT disturb calcium metabolism in birds, which causes thinning of eggshell and their premature breaking, eventually causing decline in bird populations. Eutrophication It is the natural aging of a lake by biological enrichment of its water. The greater the BOD of waste water, more is its polluting potential. Algal Bloom Presence of large amount of organic nutrients in water causes excessive growth of planktonic or free floating algae called algal bloom. Some of them are- pollution, greenhouse effect, ozone depletion, deforestation etc. Pollution is undesirable change in physical, chemical or biological properties of air, land, water or soil. But the main problem with switching over to CNG is the difficulty of laying down pipelines to deliver CNG through distribution points/pumps and ensuring uninterrupted supply. Main contaminants include nitrates, phosphates that act as plant nutrients. They increase the growth of algae, causing unsightly scum and unpleasant odors, and depleting the dissolved oxygen of water which is important for other aquatic life. Integrated Waste Water Treatment Wastewater including sewage can be treated in an integrated way, by combining artificial and natural processes. E-wastes are buried in landfills or incinerated. As the exhaust passes through the catalytic converter, unburnt hydrocarbons are converted into carbon dioxide and water and carbon monoxide and nitric oxide are changed to carbon dioxide and nitrogen gas. The vehicles fitted with catalytic converter should use unleaded petrol because lead in the petrol inactivates the catalyst. Ash is used as a jet fertiliser and the land is then used for farming or cattle grazing. Use of fertilizers and cutting of trees for industries and residential use. In human eye, cornea absorbs UV-B radiation, and a high dose of UV-B causes inflammation of cornea, called snow-blindness cataract, etc. The cities (like Delhi, Mumbai, Chennai, Kolkata etc.) will have to meet Euro III emission norms from April 1, 2005 and Euro IV Emission norms from April 1, 2010 In India, the Air (Prevention and Control of Pollution) Act came into force in 1981 and was amended in 1987 to include noise as an air pollutant. Noise is undesired high level of sound. There are working 'EcoSan' toilets in many areas of Kerala and Sri Lanka. Solid Wastes Municipal solid wastes are wastes from home, offices, stores, schools, hospitals etc. Clouds and gases reflect about one-fourth of the incoming solar radiation and absorb some of it but almost half of incoming solar radiation falls on Earth's surface heating it, while a small proportion is reflected back. The surface of earth re-emits heat in the form of infrared radiation but part of this does not reflected back due to greenhouse gases that leads to heating of earth atmosphere. The BOD test measures the rate of uptake of oxygen by micro-organisms in a sample of water. Pollutants reduce growth and production of crops as well as premature death of plants. The important part is that with this composting method, human excreta can be recycled into natural fertiliser. CBSE quick revision note for class-12 Chemistry Physics Math's, Biology and other subject are very helpful to revise the whole syllabus during exam days. These pollutants should be filtered out before releasing the harmless gases into the atmosphere. The marshes also constitute a sanctuary, which is highly diverse in the form of fishes, animals and birds that now reside there. A citizens group called Friends of the Arcata Marsh (FOAM) are responsible for the safety of this project. Ecological sanitation is a sustainable system for managing human excreta, using dry composting toilets. CNG is better than diesel because it is cheaper than petrol and diesel, burn completely with leaving any residue and cannot be adulterated like petrol and diesel. Indirectly BOD is a measure of the organic matter present in the water. Polyblend - Polyblend is the best way to combat with ever-increasing problem of accumulating plastic waste. It is a fine powder of recycled modified plastic which is mixed with the bitumen. Polyblend and bitumen, when used to lay roads, enhanced the bitumen's water repellent properties, and helped to increase road life by a factor of three. The best app for CBSE students now provides Environmental Issues class 12 Notes latest chapter wise notes for quick preparation of CBSE board exams and school-based annual examinations. Reduction of noise in industries can be affected by use of sound absorbent materials or by muffling noise. Water Pollution and its Control Water bodies are lifeline of human beings as well as other animals. The exhaust is passed through spray of water or lime. Class 12 Biology notes on chapter 16 Environmental Issues are also available for download in CBSE Guide website. Download CBSE class 12th revision notes for chapter 16 Environmental Issues in PDF format for free. The pesticides and insecticides are toxic to non-target organisms that are important components of the soil ecosystem. It consists of paper, food wastes, plastics, glass, metals, rubber, leather, textile etc. Burning reduces the volume of the wastes but the waste generally not burnt to its completion and open dumps often serve as the breeding ground for rodents and flies. Hospitals generate hazardous wastes that contain disinfectants and other chemicals and also pathogenic micro-organisms. The agents which cause undesirable change are called pollutants. Air Pollution and its Control Air is essential for respiration in all living organisms. All across the world, people are facing a wealth of new and challenging environmental problems every day. The Government of India has passed the Water (Prevention and Control of Pollution) Act, 1974 to protect the water resources. Domestic Sewage and Industrial Effluents- The sewage that comes out from house and office makes the domestic sewage. In Delhi, entire fleet of public transport was converted to compressed natural gas (CNG) mode to reduce the fast increasing pollution level of metro. According to CPCB (Central Pollution Control Board) particulate size less than 2.5 micrometers or less in diameter (PM 2.5) cause greatest harm to human health. There is a danger of seepage of chemicals from these landfills polluting the underground water resources. Municipal wastes : Bio-degradable wastes, Recyclable wastes, Non-biodegradable waste The biodegradable materials can be put into deep pits in the ground and be left for natural breakdown. An example of such an initiative is the town of Arcata, situated along the northern coast of California. The native people in collaboration with Humboldt State University created an integrated waste water treatment process within a natural system. High sound level greater than 150 dB or more generated by takeoff or a jet plane or rocket may damage ear drums thus permanently impairing hearing ability. Sample Paper all are made available through the best app for CBSE students and myCBSEguide website. It causes aging of skin, damage to skin cells and various types of skin cancers. These electrons attach to dust particles giving them a net negative charge. This leads to depletion of ozone in the stratosphere. Deforestation It is the conversion of forested areas to non-forested ones due to human activities like slash and burn agriculture also called Jhum cultivation where farmers cut down trees and burn the plant remains. Install Now Environmental Issues class 12 Notes Biology in PDF are available for free download in myCBSEguide mobile app. Automobiles are main cause of atmospheric pollution in metro cities. The cleaning occurs in two stages - (a) the conventional sedimentation, filtering and chlorine treatments are given. (b) To combat with pollutants like dissolved heavy metals, the biologists developed a series of six connected marshes over 60 hectares of marshland where plants, algae, fungi and bacteria were seeded which neutralise, absorb and assimilate the pollutants. As the water flows through the marshes, it gets purified naturally. Eventually large masses of floating plants grows and finally converting into land. The pollutants from man's activities such as effluents from the industries and homes radically accelerate the aging of lake. Auto Fuel Policy : The Government of India has laid out a road map to cut down the vehicular air pollution in many cities of India. Proper maintenance of automobiles along with use of lead-free petrol or diesel can reduce the pollutants they emit. The increase in concentration of toxicant at each successive trophic levels is called biological magnification. The Bharat Stage II will be applicable to all automobiles in all cities April, 1, 2005. The revision notes help you revise the whole chapter 16 in minutes. It includes bee-keeping, dairy management, water harvesting, composting and agriculture in a chain of processes which support each other and allow an extremely economical and sustainable venture. Main consequence of deforestation includes- Enhanced carbon dioxide concentration Loss of biodiversity Disturbed hydrologic cycles Soil erosion Desertification etc. Reforestation: Process of restoring a forest that was removed at some point of time in the past. The Government of India has recently started the Amrita Devi Bishnoi Wildlife Protection Award for individuals or communities from rural areas that have shown extraordinary courage and dedication in protecting wildlife. Chipko Movement - In 1974, local women of Garhwal Himalayas showed tremendous courage in protecting trees from the axe of contractors by hugging them. Solid wastes are relatively easy to remove but dissolved salts as nitrates, phosphates and other nutrients and toxic metal ions and organic compounds present in domestic wastes are comparatively difficult to remove. Domestic sewage mainly contains biodegradable organic matter, which can be easily decomposed by microbes like bacteria and fungi.

2015-2-23 · Human Resource Management Full Notes 1. HUMAN RESOURCE MANAGEMNT UNIT 1 Versatile Business School, Egmore, Chennai - 600 008 2. SYLLABUS UNIT I Introduction- Meaning- scope- objective- functions- policies & roles and importance of Human Resource Management- Interaction with other functional areas- HRM & HRD a comparative analysis- ... Whenever students face academic hardships, they tend to run to online essay help companies. If this is also happening to you, you can message us at course help online. We will ensure we give you a high quality content that will give you a good grade. We can handle your term paper, dissertation, a research proposal, or an essay on any topic. This paper aims to present the Difference-in-Differences (DiD) method in an accessible language to a broad research audience from a variety of management-related fields. The paper describes the DiD method, starting with an intuitive explanation, goes through the main assumptions and the regression specification and covers the use of several robustness methods. 2022-5-3 · The Medical Services Advisory Committee (MSAC) is an independent non-statutory committee established by the Australian Government Minister for Health in 1998. 2022-4-20 · NCERT Exemplar Solutions Class 10 Science Chapter 15 - Free PDF Download. NCERT Exemplar Class 10 Science Chapter 15 Our Environment presents you with answers and explanations to the questions provided in NCERT Exemplar book. Students are recommended to go through with the Exemplar provided here to get the practice of solving questions and to ...
